Re: Tintic Mine
Covering of PVC Liner

Dear Mr. Pinkerton:

We have reviewed the information submitted by Huls America Inc. concerning the heap leach pad PVC liner. The liner was expected to be covered by the ore body but has remained exposed in part since 29 June 1988.

Based on the information presented by Huls America, the PVC heap leach pad liner must be covered on or before 29 January 1989. This is necessary to protect it from exposure to U.V. radiation and the atmosphere. If the PVC liner remains exposed beyond that date then the exposed portion must not be utilized for leaching operations.

Please call Charlie Dietz if there are any questions.

Sincerely,

Kiran L. Bhayani, P.E., Manager
Design Evaluation Section
